FRANCIS DAVE TOMY M. YAMBAO

MID-LEVEL GAME DEVELOPER | UNITY & C# | TYPESCRIPT, PHASER & WEB GAMES

+63 994 824 6052 | +63 939 387 0807 | francisrigel11@gmail.com | San Pedro, Laguna, Philippines
Portfolio: rigelfrix.github.io | GitHub: github.com/RigelFrix | LinkedIn: linkedin.com/in/francisyambao11

PROFESSIONAL SUMMARY

Mid-level game developer and programmer building and maintaining live production web games, with Unity/C# experience dating back to 2019. Experienced in gameplay systems, UI state flow, animation integration, backend-connected game logic, production debugging, and iterative delivery. Uses Cursor as an AI-assisted engineering tool for code investigation, implementation support, and refactoring, alongside hands-on work with TypeScript, Phaser, Unity, C#, C++, JavaScript, Cocos-based systems, PHP, and MySQL.

CORE SKILLS

Game Development: Unity, C#, C++, Phaser, TypeScript, JavaScript, Cocos-based systems, Spine asset workflows, Shader Graph
Gameplay Systems: Gameplay loops, UI/HUD flow, animation integration, backend-linked state, physics interactions, release debugging
Web and Backend: PHP, MySQL, REST-style APIs, database design, CRUD systems, authentication, production bug fixes
AI-Assisted Workflow: Cursor, context-aware prompting, code investigation, implementation support, refactoring
Engineering Workflow: Git/GitHub, QA collaboration, documentation, codebase maintenance, iterative development

PROFESSIONAL EXPERIENCE

Mid-Level Game Developer 2025 - Present
FYB Technologies Inc. - Bonifacio Global City
- Build and maintain live production web games using TypeScript, Phaser, and Cocos-based systems.
- Implement gameplay-facing systems, UI state flow, animation behavior, and backend-connected game logic.
- Support release stability through production debugging, feature fixes, and performance-minded iteration.
- Use Cursor in an AI-assisted workflow to accelerate code investigation and refactoring within existing project requirements.

Software Developer Jan 2025 - Mar 2025
Nordic Heel Unlimited
- Built and maintained internal systems using PHP, MySQL, and JavaScript in a live business environment.
- Designed database structures and server-side logic for inventory, reporting, and workflow support.
- Improved dynamic interfaces, fixed production issues, and supported testing, deployment, and documentation.

Independent Game / Software Developer 2019 - Present
Self-Employed
- Built Unity projects from prototype to playable builds across desktop, mobile, simulation, and commissioned work.
- Implemented gameplay mechanics, tutorial flow, scoring systems, scene logic, cutscene timing, and responsive UI.
- Explored rendering, Shader Graph, physics interactions, and system architecture through independent R&D builds.

SELECTED GAME PROJECTS

DiJoker / Company Game Archive
Phaser + TypeScript | Web | Live production
- Supported gameplay behavior, UI state flow, backend-linked features, and release stability across production game captures.
- Production web-game work represented in the portfolio.

Disaster Game / TroubleFixIt
Unity | Mobile game | Commissioned build
- Turned scenario-driven concepts into readable interaction loops, scene logic, and guided player progression.
- Balanced usability, pacing, and stable behavior for applied game experiences.

Build2Connect
Unity | Mobile + desktop | Guided simulation
- Worked across tutorial sequencing, gameplay flow, cutscene timing, voice-led presentation, and interactive progression.
- Delivered a finished playable build for mobile and desktop targets.

3D Basketball Shooting Game
Unity | Windows desktop prototype
- Built a first-person charge-and-release shooting loop with ball control and scoring feedback.
- Published separate desktop build and Unity source repositories.
